

Crime Prevention Through Environmental Design (CPTED)

A 40-Hour Basic CPTED Practitioner Written by Randy Atlas, PhD., FAIA, CPP

Training Dates: November 10—14, 2025

Cost: \$500

Instructor: John Gabrielson CCPS, CPTED Practitioner

Location: Williamson County Sheriff Training Center

8160 Chandler Rd., Hutto, TX, 78634

**ICA ACCREDITED
COURSE - CLASS B**

Register: <https://crimereductioninstitute.com> Course # TCOLE 2103 | 40-hours

CRI is now delivering Crime Prevention Through Environmental Design (CPTED) course is accredited by the International CPTED Association. This course was formally taught by Texas A&M Engineering Extension Service (TEEX). This training CPTED aims to enhance participants' understanding of their immediate physical environment. By altering this perception, participants can better grasp the direct relationship between the environment, human behavior, and crime.

Understanding the design, management, and effective use of the environment is crucial for successful crime prevention efforts. While CPTED is not a complete solution to community problems, it provides tools to eliminate or reduce environmental obstacles to social, cultural, or managerial control. Importantly, CPTED does not require extensive technical knowledge. To be an effective community crime prevention strategy, basic CPTED concepts must be easily understood by as many people as possible.

Target Audience: School Resource Officers, Law Enforcement, Private Security, Architects, City Planning, Developers, Code Enforcement, etc.

Topics Covered: Access Control, Surveillance, Territoriality, Legitimate activity support, Management, Maintenance strategies, 3-D concept, CPTED Matrix, CPTED assessment and survey process, Developing plans to prevent environmentally included crimes, Assessing security liability and how to reduce premise liability, Examining the impact of road closers, barricades, gatehouses, and traffic calming, Practical applications of lighting, Applications of CPTED in schools, multifamily housing, commercial and mixed-use environments
